

# PhishOn

## Phishing Simulator & Training Platform

Visit [phishon.com](http://phishon.com) for more information.

### Phishing is your company's largest security threat

Despite your company's best security efforts, your employees are still your weakest security link. Don't blame them. Test them, then educate them with training. We provide a platform that enables your company to test and train your workforce on all known phishing scams.

Phishing is the #1 threat to your company and phishing scams are targeting and baiting your employees. In fact, 95 percent of all attacks on networks are the result of successful phishing scams, according to the SANS Institute, one of the leading computer security training organizations.

Cyber attackers are finding that it's easier to hack humans than it is to hack through robust online and physical defenses. The use of social engineering in cybercrime often involves tricking people into breaking normal security procedures. The success of these exploits often relies on people's willingness to be helpful and compliant.

## Secure your company with testing and realtime training.

Your employees straddle your security controls which puts your company at extreme risk for a data breach that could result in your company's information and customer data being compromised.

PhishOn is a phishing and social engineering threat simulator, with wraparound security awareness training, that mitigates the threat and risk of a data breach by building healthy intentional skepticism. Easily deployed in under an hour, you can empower your employees to be your first line of defense to stop threats before they do damage to your company and reputation.

## Simple implementation, industry leading technology.

You can deploy PhishOn in under 30 minutes—we do the heavy lifting so you can proceed with business as usual. PhishOn is cloud-based, automated, and continually updated to reflect new and emerging attacks. Turn it on today to protect and secure employee and customer data and your reputation.

### Product Features

Automated cloud-based system that is continually updated to reflect new and emerging attacks.

Realtime training engine that reinforces the right behavior, right now.

Attack and threat automation, randomization and scheduling.

One plan, at one price, with all features and no limits.

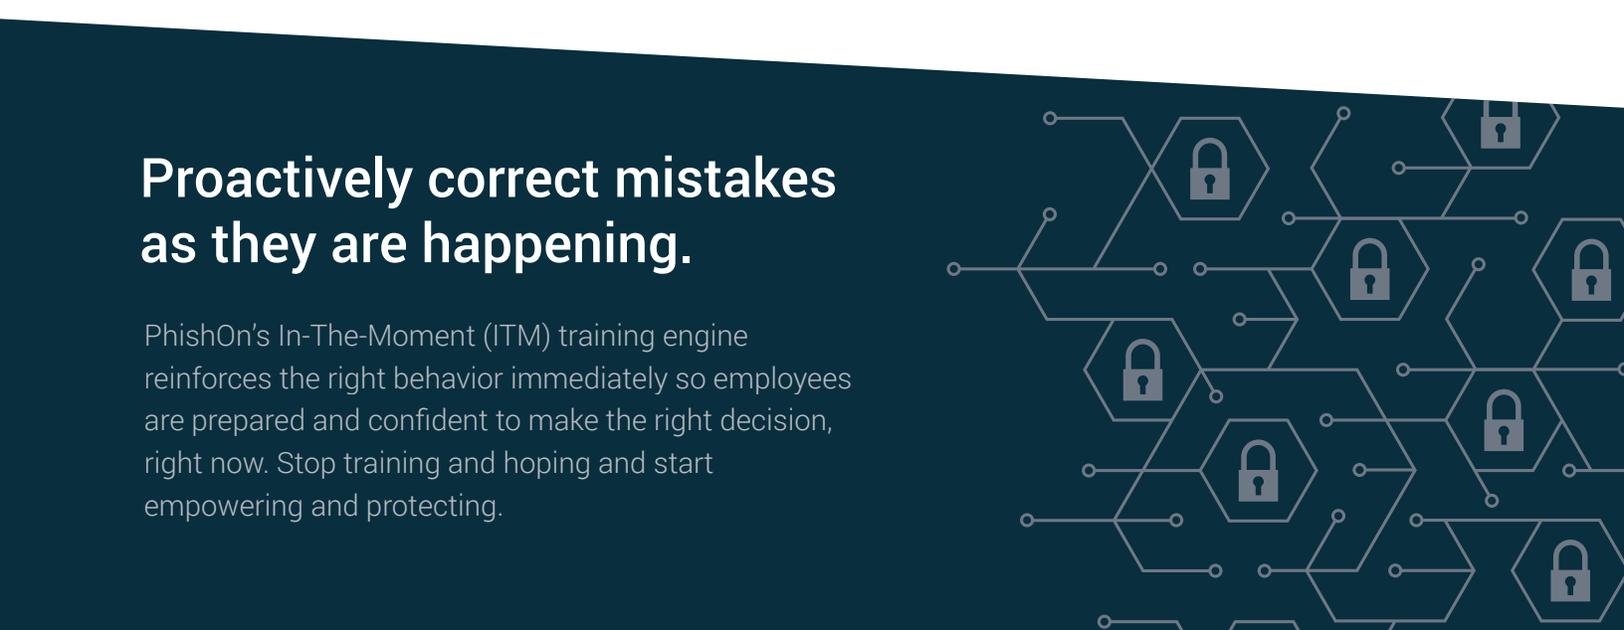

Scales to protect organizations of all sizes

World class hosting, reliability and performance

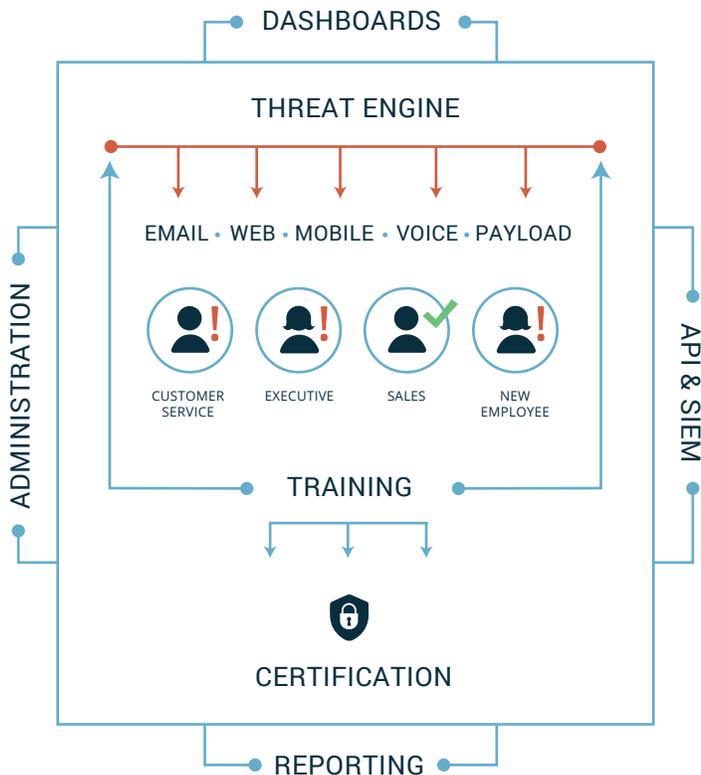

Dedicated, high-touch support

## Proactively correct mistakes as they are happening.

PhishOn's In-The-Moment (ITM) training engine reinforces the right behavior immediately so employees are prepared and confident to make the right decision, right now. Stop training and hoping and start empowering and protecting.

## How it works

1

We investigate your organization using Open Source Intelligence (OSINT) and analyze your industry, workflows, applications, and behavior.

2

We customize and design many targeted scams, progressively more difficult, based on our findings.

3

We target your employees via email, mobile, and phone—with randomized delivery to catch them off guard.

4

We watch and analyze the behavior of your systems and employees. Employees that fall for a scam are flagged for training in your PhishOn portal.

5

Training is presented to employees on demand. When your PhishOn program has finished, you will receive a complete report and analysis for review.

# Seeing is believing, let us show you.
