

## Phishing Simulator & Training Platform

### Phishing is Your Company's #1 Security Threat

Despite your company's best security efforts, your employees are still your weakest security link. Don't blame them. Test them, then educate them with training. **PhishOn** can help.

Phishing is the #1 threat to your company and phishing scams are targeting and baiting your employees. In fact, 95 percent of all attacks on networks are the result of successful phishing scams, according to the SANS Institute, one of the leading computer security training organizations.

Cyber attackers are finding that it's easier to hack humans than it is to hack through robust online and physical defenses. The use of social engineering in cybercrime often involves tricking people into breaking normal security procedures. The success of these exploits often relies on people's willingness to be helpful and compliant.

### Service Overview

Your employees straddle your security controls which puts your company at extreme risk for a data breach that could result in your company's information and customer data being compromised.

**PhishOn** is a phishing and social engineering threat simulator, with wraparound security awareness training, that mitigates the threat and risk of a data breach by building healthy intentional skepticism. Easily deployed in under an hour, you can empower your employees to be your first line of defense to stop threats before they do damage to your company and reputation.

### Best-in-Class Software

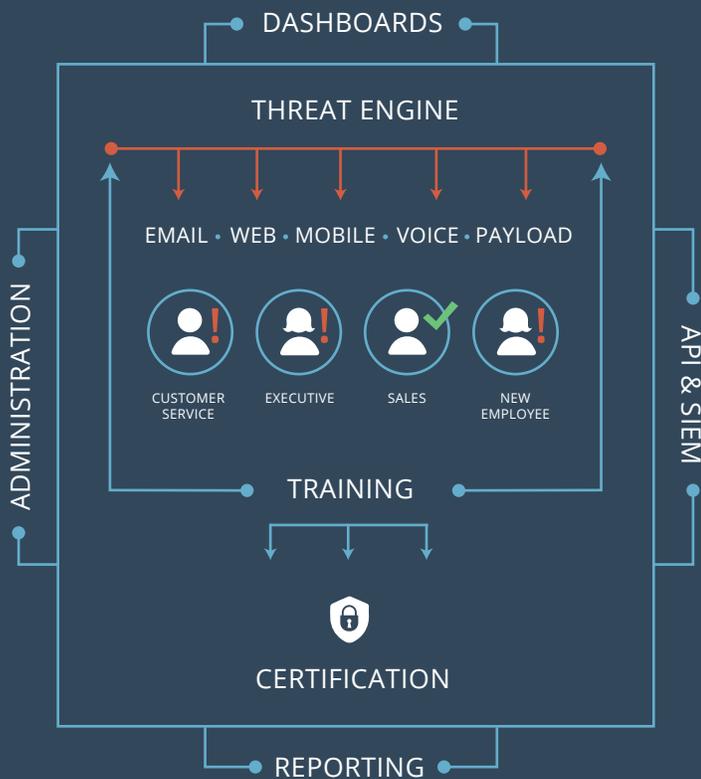

You can deploy **PhishOn** in under 30 minutes—we do the heavy lifting so you can proceed with business as usual. **PhishOn** is SaaS based, automated, and continually updated to reflect new and emerging attacks. Turn it on today to protect and secure employee and customer data and your reputation.

### What is Phishing?

Phishing is when a malicious party sends a fraudulent email disguised as a legitimate email, often purporting to be from a trusted source. The message is meant to trick the recipient into sharing personal or financial information or clicking on a link that installs malware. How it works is an employee receives an email and clicks on a link or opens a file they weren't supposed to open – many times this leads to a data breach. According to the recent Verizon data breach report, a phishing email is the first phase of an attack. Why? Because it works well and is highly effective!

### Key Benefits

- SaaS based, automated and continually updated to reflect new and emerging attacks
- Easy to manage, non-intrusive and built to integrate [API & SIRM Integrations]
- Attack Automation, Randomization & Scheduling
- Laser focused product and no SaaS based bloatware
- One price, all features, no limits

## How it Works

1

**Unique:** We investigate your organization using Open Source Intelligence (OSINT) and analyze your industry, workflows, applications, and behavior.

2

**Targeted:** We customize and design many targeted scams, progressively more difficult, based on our findings.

3

**Creative:** We target your employees via email, mobile, and phone—with randomized delivery to catch them off guard.

4

**Vigilant:** We watch and analyze the behavior of your systems and employees. Employees that fall for a scam are flagged for training in your PhishOn portal.

5

**Comprehensive:** Training is presented to employees on demand. When your PhishOn program has finished, you will receive a complete report and analysis for review.

## Additional Benefits

- **Scales to Protect Organizations of all sizes**

Whether you have 100 or 5k employees, we have you covered.

- **World Class Hosting, Reliability and Performance**

PhishOn operates across multiple world-class data centers offering N+1 or better redundancy on all systems.

- **High Touch Support**

Dedicated Threat Specialists customize, support and guide your team to success .
